Bypass a Zone

Overview   Bypass Combinations   Related Topics

Overview

Customers can conduct a Partial Test to test their system. This is a scheduled system test where individual zones and/or services are excluded (bypassed) for a specified amount of time. Partial Tests can be extended or canceled. This test is often used when a sensor is potentially faulty or if it is consistently sending false alarms. Bypassing the zone that the peripheral device is in will allow you to continue using your system until the issue can be addressed.

On most systems, zones can be bypassed by entering one of the sequences shown below on the keypad. If you do not see your system below, please refer to your **system manual** or search our Help Center for more information.

Note: You can only use Partial or Quick Bypass instructions if your system was enabled by the installer during installation.

Unsure which system is yours?

1. While logged into **MyADT**, click on the blue Overview tab located on the left side of the top menu.
2. On the Overview page, to the right of the Bill & Payment Summary section, you will find "System Information".
3. The name of your system will be shown (e.g., Safewatch Pro 3000).

Common Zone Bypass Keypad Combinations:

Ademco Lynx: Additional Functions

[security code] + [BYPASS] + [2-digit zone number]
