

Silence Low Battery Beeping

A Low Battery Warning is most often displayed as BAT, LOW BATT or SYSTEM LO BAT on the touchpad. In addition, many systems will "beep" or "chirp" to alert you that a system or peripheral device battery is low. This warning signals that your battery must be either recharged or replaced.

On most systems, low battery trouble beeps can be silenced by entering one of the following sequences on the keypad. If you do not see your system below please refer to your system manual.
